Version 1.0 · July 2026 · drippyrewards.com

00 Abstract

$DRIPPY is a Solana SPL token that pays its holders real SOL, automatically, every 30 minutes. A 5% tax on every buy and sell is converted entirely to SOL and distributed directly to holder wallets — no staking, no claiming, no gas, no action required. A permanent Burn-to-Earn mechanism grants wallets that burn $DRIPPY a 2x reward weight on the burned amount, forever, even at a zero token balance. The result is a token where holding pays, burning pays double, and every mechanism is verifiable on-chain.

01 Introduction: The Dividend Thesis

Most memecoins offer a story and a chart. $DRIPPY offers a story, a chart, and a cash flow.

The core thesis is simple: a token that continuously returns value to its holders builds a fundamentally different kind of community than one that only rewards exit. When every 30-minute cycle lands SOL in your wallet, holding stops being passive hope and becomes participation in a working machine. When burning your tokens permanently doubles your claim on that machine, conviction becomes a rational strategy rather than a slogan.

$DRIPPY launched on Forgepad on May 16, 2026, and the distribution engine has run continuously since — 24/7, on a fixed half-hour cycle, from block one.

02 Token Overview

Name / Ticker	Drippy · $DRIPPY
Network	Solana (SPL)
Contract Address	`EPRZgmvU4aTQ4UaC4bywgNvxJ5YmhuKqM1bx3gw4DRPY`
Launch platform / date	Forgepad · May 16, 2026
Buy / Sell tax	5% / 5%
Tax destination	100% converted to SOL for holder rewards
Distribution interval	Every 30 minutes · automatic wallet delivery
Burn multiplier	2x reward weight on burned amount — permanent
Burn address	N1LCBQJnjLP3ppv7npzL5Btzf5Yp3hBMr6s8GmVfEyV

03 The Distribution Engine

TRADE every buy & sell → **5% TAX** collected in contract → **→ SOL** auto-converted → **30:00** cycle completes → **HOLDERS** direct wallet delivery

No team treasury skim · no multisig delay · no manual step between trading activity and holder rewards

3.1 · MECHANISM

Every buy and every sell of $DRIPPY carries a 5% tax, with no exceptions and no exempt wallets. Collected tax accumulates in the contract and is automatically converted to SOL. Every 30 minutes, provided there has been trading volume in the window, the engine distributes the accumulated SOL directly to eligible holder wallets.

Distribution is weighted: a wallet’s share of each payout equals its share of total eligible reward weight — tokens held plus any registered burn weight (Section 4). Holders take no action to receive rewards. There is no staking contract to enter, no claim transaction to sign, and no gas cost to the recipient. SOL simply arrives.

3.2 · PROPERTIES

- **Continuous.** The engine runs 24/7 on a fixed 30-minute cycle.
- **Volume-linked.** Rewards scale with trading activity. High-volume periods produce larger distributions; quiet windows produce smaller ones or roll forward.
- **Direct.** Payouts are native SOL transfers to holder wallets, visible on any Solana explorer.
- **Proportional.** Larger positions and larger burn weights earn proportionally larger shares. Very small holdings may round below the payable threshold in a given cycle.

3.3 · VERIFIABILITY

Every distribution cycle is recorded on-chain. The live ledger at drippyrewards.com displays each payout with a direct link to the transaction on Solscan, alongside cumulative totals: total SOL distributed, completed payout cycles, and wallets reached. Any holder can paste their address into the on-site wallet checker to see their complete personal payout history, current holdings, and burn status — all cross-referenced to on-chain transactions.

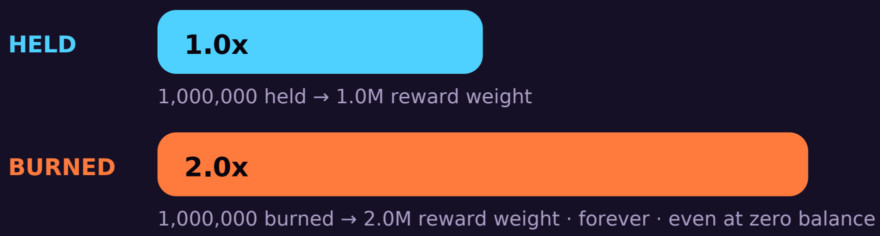
The engine’s economic behavior is fully public. Operational infrastructure details are intentionally not published as a security measure; the on-chain record is the source of truth.

04 Burn-to-Earn: Drippy’s Chosen

4.1 · MECHANISM

Any wallet may burn $DRIPPY by sending tokens to the designated burn address, or via the burn function on the Forge token page. Burned tokens are permanently removed from circulating supply and cannot be recovered. In exchange, the burned amount is registered as burn weight — and burn weight earns rewards at 2x the rate of held tokens, permanently. A wallet that burns its entire position and holds zero $DRIPPY continues to receive distributions on its burn weight forever.

REWARD WEIGHT — 1,000,000 $DRIPPY, TWO STRATEGIES



Weighted share of every 30-minute distribution = your reward weight ÷ total eligible reward weight.

4.2 · RATIONALE

- **Scarcity.** Every burn permanently reduces supply, concentrating the value of remaining tokens.
- **Reward density.** A smaller circulating supply means each remaining reward-weighted unit claims a larger share of every distribution.
- **Conviction signaling.** Burning is costly and irreversible. A community’s cumulative burn record is unfakeable proof of commitment — unlike promises or locked-token theater.

4.3 · INTEGRITY

Burn status confers status, never gameplay advantage. Burn tiers unlock recognition, cosmetics, and leaderboard placement in the Hall of Flame; skill-based competition on the game leaderboards remains strictly separate and unaffected by holdings or burns.

05 The Burn Record & Supply

The $DRIPPY community's burn history is among the project's strongest credentials. In roughly two months since launch, holders have voluntarily burned approaching a quarter of total supply — not as a launch gimmick at negligible valuation, but progressively, at meaningful market caps, representing substantial real value permanently committed. Community burn events, team-matched "burn train" campaigns, and individual conviction burns are all recorded and ranked publicly in the Hall of Flame.

TOTAL SUPPLY

- Burned — permanently destroyed, 2x weight registered
- Circulating — held by the pack, earning every cycle

Figures as of July 2026 — live totals (tokens burned, burn events, % of supply, SOL distributed) are displayed on the drippyrewards.com dashboard and verifiable on-chain.

06 Supply & Treasury Philosophy

- **Deflationary by community action.** Supply only decreases. There is no mint authority in operation and no mechanism to inflate supply.
- **No reward skim.** 100% of the trading tax converts to holder rewards. Team sustainability comes from aligned holdings and future ecosystem revenue — merch, game, partnerships — not from the reward pool.
- **Chart resilience.** The project maintains discretionary capacity for buyback-and-burn support during significant drawdowns, and prioritizes deepening liquidity as it scales. Specific triggers and balances are intentionally not published.
- **Transparency in giving.** Planned charitable initiatives will operate through dedicated, publicly viewable on-chain donation wallets.

07 The Ecosystem

$DRIPPY ships product, not just promises. Everything below is live as of this writing.

drippyrewards.com

The hub: live on-chain dashboard (price, market cap, supply, burns, distributions), integrated Jupiter-powered swap, live chart, payout ledger, and the full Legend of Drippy lore.

Wallet Checker · “My Drips”

Paste any address to see total SOL earned, payout count and history, current holdings, tokens burned, burn weight, and reward status.

DripQuests

Twelve on-chain achievement quests across four ranks, from first hold to Diamond Dripper. Wallet-connected progression, unlockable art, shareable rank cards.

Drippy Run

A full browser arcade game: ten levels, two boss fights, power-ups, combos, and a global high-score leaderboard. Desktop & mobile. Weekly tournament boards run alongside all-time rankings.

Hall of Flame

Public burn rankings and top-earner leaderboards. Status, not skill.

Telegram arcade

A second, separate game running inside the community Telegram.

Content engine

Original Drippy comics, TikTok presence, X Spaces and AMAs, and an expanding lore universe.

In development

Drippy World — a substantially larger NFT-gated game with a Genesis NFT launch as its entry ticket — and a hosted live-video broadcast platform for cross-project AMAs.

08 The Forge Partnership

$DRIPPY launched on Forgepad and maintains a deep relationship with the Forge platform. Under the current partnership milestone, upon $DRIPPY sustaining the agreed market-cap threshold, 5% of Forge platform fees flow to the $DRIPPY holder reward pool — an external, recurring revenue stream layered on top of the native tax engine.

This is a structural distinction from typical memecoin economics: rewards funded not only by the token's own trading volume, but by revenue from a growing launchpad platform. The partnership is expected to deepen as both projects grow.

09 Direction

The full living roadmap is published at drippyrewards.com. Items represent direction, not guarantees — sequence rather than fixed dates. In summary:

NOW · Q3 2026

The 25% supply-burned milestone · accelerated community burn campaigns · the Drippy Broadcast (hosted live-video AMA platform) · merch design · engagement growth.

NEXT · Q4 2026

Drippy World Genesis NFT launch · full merch line · deeper Forge integration · DEX verification & visibility · liquidity deepening · the transparent on-chain Dog Rescue pilot.

BEYOND · 2027+

Expanded game editions · staking variants & DeFi exploration · merch revenue routed to holder rewards · milestone-triggered charity commitments · progressive community governance · the long-term 50%+ burn horizon.

10 Security & Trust Model

- **On-chain truth.** All economic activity — distributions, burns, supply — is verifiable on public Solana infrastructure: Solscan, DexScreener, and the Forge token page.
- **Wallet safety.** The site never requests seed phrases; wallet connection is used only for read access and optional leaderboard name claims via message signing. Full model: drippyrewards.com/security.
- **Immutable burns.** The burn address is publicly posted; tokens sent there are provably unrecoverable.
- **Verify the CA.** Always confirm the contract address against official channels before trading.

11 Risk Disclosure

$DRIPPY is a memecoin. It is not an investment product, a security offering, or a promise of profit. “Dividend” is used as community branding for the automatic reward mechanism, not as a legal or financial term. Cryptocurrency markets are highly volatile; the value of $DRIPPY can go to zero, and reward distributions depend on trading volume, which is not guaranteed. Burn-to-Earn rewards depend on the continued operation of the distribution engine and continued trading activity. Roadmap items are directional intentions, not commitments, and may change or be discontinued. Nothing in this document is financial, legal, or tax advice. Do your own research. Never spend more than you can afford to lose.

Drippy is a good dog. But he is still a dog.

WOOF.

Hold $DRIPPY. Burn for glory. Stay loyal. Get paid forever.
